

Special Seminar

Nature's Barometer of Environmental Health

Dr. Judit Smits

Associate Professor

Faculty of Veterinary Medicine

University of Calgary

10 am, Tuesday, February 19, 2013

Room 146, Kirk Hall

This seminar will present a series of cases in which wildlife have provided insights into the health status of different environments that have been affected by anthropogenic disturbance. The geographic areas that will be represented include some closer to home (the Canadian prairies), a bit farther away but still in Canada, or much farther away in Europe and Africa.
