

Update for Immunization (Publicly Funded Influenza)

This is a **mandatory training** update to reinforce knowledge for advanced method certification.

At the end of this presentation you will be able to:

- Demonstrate the reporting procedures for Adverse Effects Following Immunization (AEFI) for publicly funded influenza
- Describe the cold chain process, and discuss prevention and management of cold chain breaks
- Demonstrate the reporting procedures for flu vaccine wastage

Presented by:

- Laura A. Matz, RN MPH Public Health Nursing Consultant, Population Health Branch, Saskatchewan Ministry of Health
- Loretta van Haarlem, RN, DipN., BN, MPH, CCHN(C), Public Health Nursing Consultant Population Health Branch, Saskatchewan Ministry of Health

“One of the guiding principles in establishing this scope of practice is to ensure that pharmacists meet the same standards as other professionals in the health system providing similar services. This update is based upon our experience and health system feedback and is intended to reinforce that principle. It emphasizes knowledge from your certification training that is important to the public health system, and also fills gaps that have been identified. For these reasons, this update is part of the Saskatchewan specific module for advanced method certification and is required for all certified members when you renew your next 2018-19 license.” - Ray Joubert, Registrar, Saskatchewan College of Pharmacy Professionals
